Contents

Special issue: Control and Automation in Cyber-Physical Systems
Guest Editors: Lianqing Liu and Hiroyasu Iwata

Editorial

Special Issue on Control and Automation in Cyber-Physical Systems 865
L Liu and H Iwata

Articles

A 3D object model for wireless camera networks with network constraints 866
J Tan, F Kong and W Liang

Model and control for four-powered-caster vehicle: a probability-based approach 875
Y Liu, Y Jia and N Xi

Influences of visual feedback indicator scales on human upright postural control 883
L Pei, H Li, Y Fu, Y Yang and J Li

Development of microfluidic-based telemedicine for diabetes care and screening 893
P Yao, S Tung, Z Zhan, J Hua and Z Dong

Sign language translation system based on micro-inertial measurement units and ZigBee network 901
G Shi, Z Li, K Tu, S Jia, Q Cui and Y Jin

Modeling and control for a bipedal robot on slopes 910
B Sheng, M Huaqing, D Min and Z Zhongjie

Automatic kinematic modelling of a modular reconfigurable robot 922
X Pan, H Wang, Y Jiang and J Xiao

Compensation of gap sensor for high-speed maglev train with RBF neural network 933
Y Jing, J Xiao and K Zhang

Ordinal outlier detection based on recursive uniform partitioning 940
G Chen, J Shi and YL Cai

Likelihood-based iteration square-root cubature Kalman filter with applications to state estimation of re-entry ballistic target 949
J Mu and Y-I Cai
